

Goddard Design - ShowPlayer™
The simple sophisticated show control software for the Lil'DMXter2
Includes Enhanced ShowSaver™

Have you ever needed to control a small self-contained lighting system that executes a repetitive sequence? Was it for a trade show, a promotional point of sale exhibit, a parade float, or was it for lighting on moving scenery? How about the test routine for that new moving light? You needed something robust, simple and not too expensive. Maybe it was only a short term rental, and you really wished it was a feature of some piece of equipment that you already owned.

Well, we got a lot of those requests, "If only ShowSaver could run a sequence or a chase!" Now it can, and a lot more too. **ShowPlayer** is our new cue to cue software which includes an enhanced version of **ShowSaver**.

ShowPlayer is available for **Lil'DMXter2** and for the **DMXter-2U**. Both versions function in the same way. The extended hardware of the **DMXter-2U** will allow more extensive triggering options and output options, as well as the ability to store more looks.

ShowPlayer allows you to store up to 160 cues. These can be assigned to any of 1000 different possible cue numbers.

ShowPlayer allows completely unattended operation. An external device can start or stop a sequence. Sequences may step cue to cue based on time or on an input from an external device. On a **DMXter-2U** a cue may also produce a contact closure output to trigger an external device.

ShowPlayer supports fade and hold times of up to one hour.

Since cues are stored in compressed form, the number of cues that can be stored depends on the number of slots used in the cues. Cues can be recorded from the output of a console or they can be entered and edited from the keyboard. Unlike some inexpensive controllers, **ShowPlayer** supports all 512 DMX slots.

When the **Enhanced ShowSaver** feature of **ShowPlayer** is used, the user can program automatic changeover to backup mode upon main DMX failure.

ShowPlayer comes with one very special unique feature - each copy contains a fully functional copy of the famous **Lil'DMXter** software!

For the **Lil'DMXter2**, **ShowPlayer** is an optional upgrade. Contact Balanced Technology on 1300 305 832 for pricing.
